

Stephen Toomey

Full-Stack Software Engineer

Nigeria (Open to Remote, Hybrid, and Relocation) | +234 701 082 0287 | toomeyastephen@gmail.com | github.com/toomeydevs | stephentoomey.dev

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), HTML5, CSS3, Node.js, SQL Basics
Frontend:	React, Context API, useReducer, React Router, Chart.js, Vite, Responsive Design, Accessibility (WCAG), BEM, CSS Custom Properties
Backend:	Node.js, Express.js, REST API Design, MongoDB, Mongoose ODM, JWT Authentication, bcrypt, Socket.io
Cloud & DevOps:	Docker, Docker Compose, GitHub Actions (CI/CD), Vercel, Railway, MongoDB Atlas, Cloudinary, Postman
Payments & APIs:	Paystack, Multer, Axios, RESTful Architecture
CS Fundamentals:	Linked Lists, Stacks, Queues, Hash Maps, Trees, Heaps, Graphs · BFS, DFS, Dijkstra, Merge/Quick Sort, Dynamic Programming, Big O
Testing:	Jest, React Testing Library, Vitest

PROJECTS

AfriMarket — Multi-Vendor Marketplace — *Capstone Project*

React · Node.js · Express · MongoDB · Paystack · Cloudinary · Docker · GitHub Actions

- Architected a full-stack multi-vendor marketplace enabling sellers to create stores, manage products with image uploads, and process orders
- Integrated Paystack payment gateway for secure Nigerian Naira transactions with automatic stock deduction
- Built role-based access control: buyer marketplace with search/filter/cart, seller dashboard with product CRUD, admin panel with full platform oversight
- Implemented Cloudinary for product image uploads with automatic optimization and Multer middleware for file handling
- Containerized the application with Docker and set up automated CI/CD pipeline using GitHub Actions
- Features: multi-tenancy, order status workflows, real-time cart with Context API + useReducer, protected API routes

Full-Stack Social Media Dashboard

React · Node.js · Express · MongoDB · Socket.io · Chart.js · JWT · Docker

- Built real-time social dashboard with live notifications using Socket.io WebSockets
- Implemented interactive analytics with Chart.js tracking posts, likes, and comments
- Designed secure JWT authentication with bcrypt password hashing and protected API routes
- Features: post creation/deletion, like/unlike, nested comments, notification panel, dark mode

Full-Stack Note-Taking Application

React · Node.js · Express · MongoDB · Mongoose · JWT · bcrypt · Vercel · Railway

- Built a full-stack CRUD application with category filtering and full-text search using MongoDB \$regex
- Added complete authentication system: signup, login, protected routes, auto-login with JWT verification
- Implemented user data isolation — each note is scoped to its creator
- Deployed frontend (Vercel) and backend (Railway) with environment variable management

E-Commerce Product Page

React · Context API · useReducer · useMemo · LocalStorage

- Built feature-rich product listing with search, category filtering, and multi-field sorting
- Managed complex cart and wishlist state using Context API and useReducer following Flux/Redux patterns
- Optimized performance with useMemo for filtered, sorted, and paginated product rendering

Weather Dashboard

React · React Router · OpenWeatherMap API · Custom Hooks · Geolocation API

- Developed weather application with city search and browser geolocation support

- Created reusable useWeather custom hook encapsulating all API logic and state management
- Features: dynamic weather-responsive gradient backgrounds, unit toggle, 5-day forecast, error/loading states

RESTful Blog API

Node.js · Express · MongoDB · Mongoose · Railway

- Designed and deployed a production REST API with full CRUD operations
- Implemented MongoDB query filtering, search, and server-side validation with custom error handling
- Migrated from file-based storage to MongoDB with Mongoose ODM for scalable data persistence

COMPUTER SCIENCE KNOWLEDGE

Built from scratch to understand internals — not just usage:

Data Structures:	Linked List, Stack, Queue, Hash Map, Binary Search Tree, Heap (Priority Queue), Graph (Adjacency List)
Algorithms:	BFS, DFS, Dijkstra's Shortest Path, Merge Sort, Quick Sort, Heap Sort, Dynamic Programming (Memoization & Tabulation)
Patterns:	Recursion, Divide and Conquer, Sliding Window, Two Pointers, Greedy
Applications:	Caching systems, undo/redo managers, task schedulers, route planners, priority queues

EDUCATION

Bachelor of Science in Computer Science

University of the People · Graduated 2025

Relevant coursework: Data Structures, Algorithms, Web Development, Database Systems, Software Engineering

Self-Directed Full-Stack Engineering Program · 2024 – 2025

Completed intensive project-based curriculum: 7 deployed applications covering full-stack development, cloud deployment, payment integration, and computer science fundamentals

ADDITIONAL

- Languages: English (Fluent)
- Availability: Immediate
- Work Authorization: Open to remote roles globally; eligible for on-site roles in Nigeria
- Portfolio: stephentoomay.dev — live demos of all projects
- GitHub: github.com/toomeydevs — clean commit history and documented codebases
